life saving light

## Lutra LED Lightline

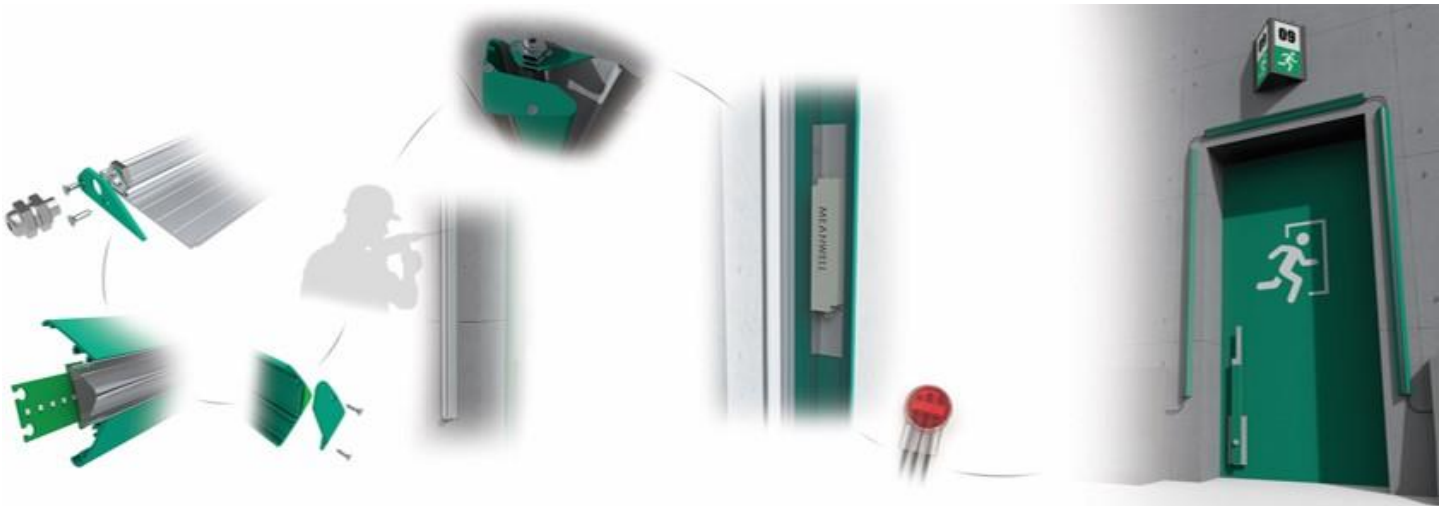

Do not make a labyrinth of your escape route

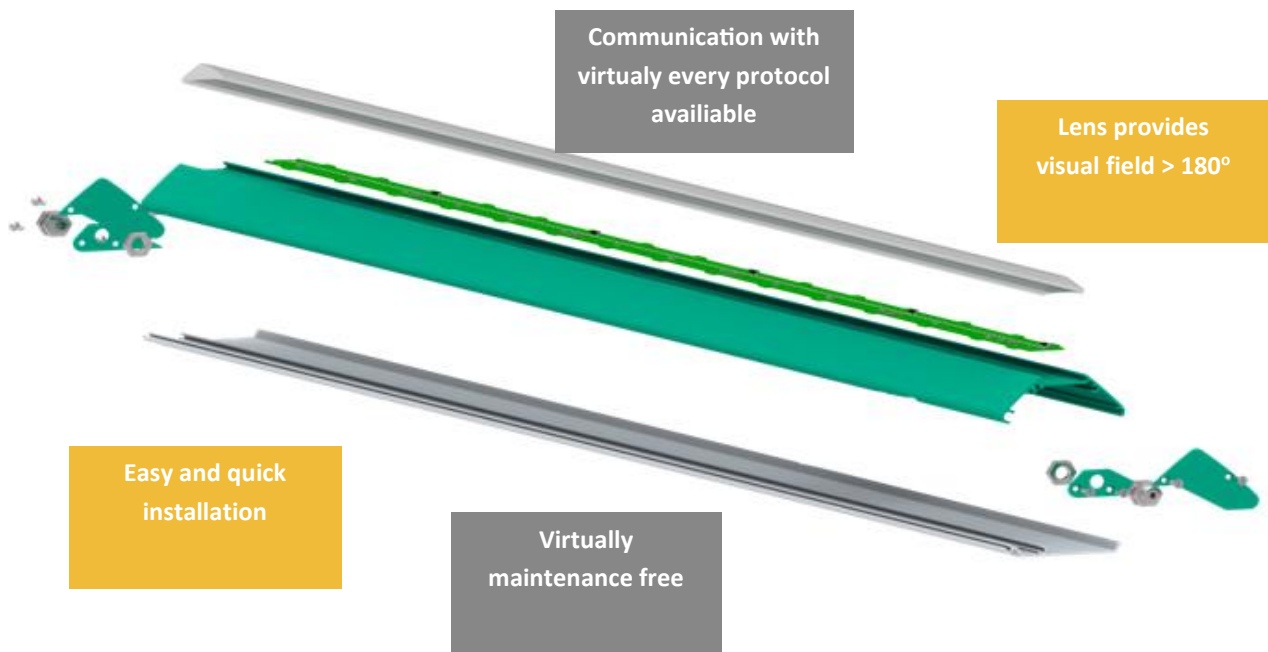

## Lutra LED light line

Lutra is LED light line that can be used in various ways to give optimal escape routes and emergency exit doors. This LED light line of very high quality is standard available in length from 250 to 3000 mm. By using high quality lenses, the light line is visible at an angle of  $\pm 180^\circ$ . This makes it possible to see the escape route or emergency doors from entire room in a case of emergency. For a longer light line in one piece, please contact our sales department.

The Lutra LED light line is constructed with high-quality materials. The casing is made entirely of aluminium. The electrical parts and LEDs are completely sealed. This makes the Lutra LED light line suitable for use in damp rooms or outdoors.

Voltage	24 VDC		With x Hight (mm)	85 x 45
